

Data breach Exercise

Record a video or presentation explaining the following:

1. Provide a definition of a data security breach.
2. What requirements (if any) are placed on data controllers to notify its data subjects that their data has been affected by a data security breach in the UK? Is this the same in the US?
3. Research and identify the largest breaches (number of records stolen) for the years from 2010 up until the present.
4. Research, discuss and identify the most common causes of data security breaches (at least 3 causes should be identified).
5. Pick 2 of the common causes identified above and find real-life examples of individuals or organisations that have been compromised using these. You can use your own personal real-life examples.
