

Scanning a network

Download and try software to scan your network, monitor, wifi, or to view devices attached.

Try a couple of different pieces of software and maybe mobile device apps (you choose).

Read up on them, try them out.

Consider how ports might be open and reasons, scan some ports and make a note / use a screenshot to show the scan of ports and what is using the ports at that particular time.

Save some screenshots with notes as to their use within a Word document and share with your lecturer.
