

Password tester and more

Security.org

How secure is my password?

<https://www.security.org/how-secure-is-my-password/>

I tested a password with 18 characters, an easy to remember password with numbers, uppercase, lowercase, special characters.

The result of 'it would take a computer about ... 1 quadrillion years to crack' ... maybe!

Here's a wee secret: !1haveaguid'1'4u?!

It might take a while typing it and I suppose this other one might be okay: @wurk,nawhols!

According to them, it would take 6 million years and maybe the human race might be extinct by then, or at least not care about cracking my password 😊

Bitwarden

There's also one at BitWarden

<https://bitwarden.com/password-strength/#Password-Strength-Testing-Tool>

Kaspersky – Password Generator

Kaspersky offers a free Password Checker / Tester and it also helps you generate a password with options as to digits, symbols, uppercase use.

<https://password.kaspersky.com/>

Comparitech

Also the same at Comparitech but I trust Kaspersky more than other places.
