

Assessment reports – Paper 1

Task 1

Produce at least two of your own different types of digital media files for the project website in context with the given brief. File types can be of type: image, sound or video.

Size and optimise your digital media files taking into consideration quality is not poor and the download speed when used within the website does not impair the user's experience.

Write a short report detailing the steps taken to create and optimise the digital media files, including mention of the source of original files and software used.

Task 2

Develop the web pages and upload them to a web-server.

HTML tags that must be used:

- Headings
- Hyperlinks
- Div Tags *
- Tables
- Lists
- Images

CSS features that must be used:

- Text Formatting
- Margins
- Padding
- Colour

(* semantic tags can be used instead, such as layout tags – header, nav, article, section, aside, footer)

Task 3

Provide evidence with the use of screenshots and explanation for the following (use these as headings and check them off as complete when fully done):

Web address of website online

Screenshot / printout of website online

All web pages submitted have been validated with current W3C guidelines

Evidence of meeting accessibility and usability requirements

Hyperlinks and navigation checked

Justification received for use of fonts, font sizes and colour schemes

Website appears to adhere to copyright legislation

Alternative text for images

Digital media files generated by candidate and used in website

Digital media files of acceptable quality and speed

Website designed, developed and checked for mobile devices

Ensure all reports and evidence is complete.
