

Windows 11 Backup Restore

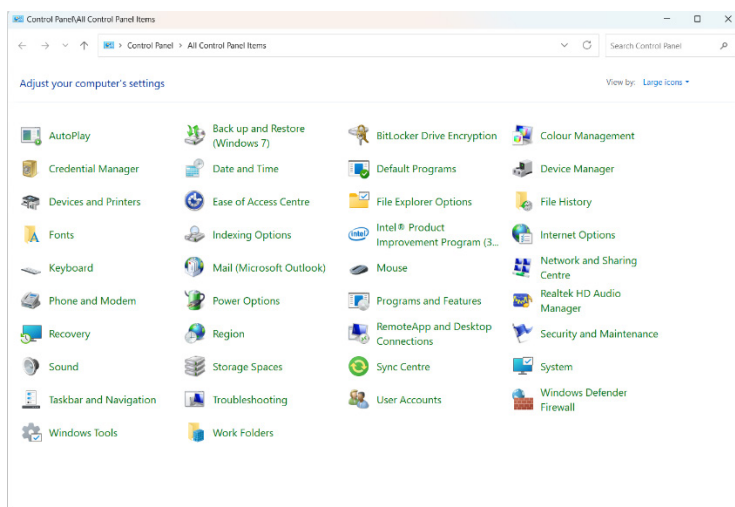

Search (Cortana) > Backup > Accounts

Backups nowadays tend to be to One Drive.

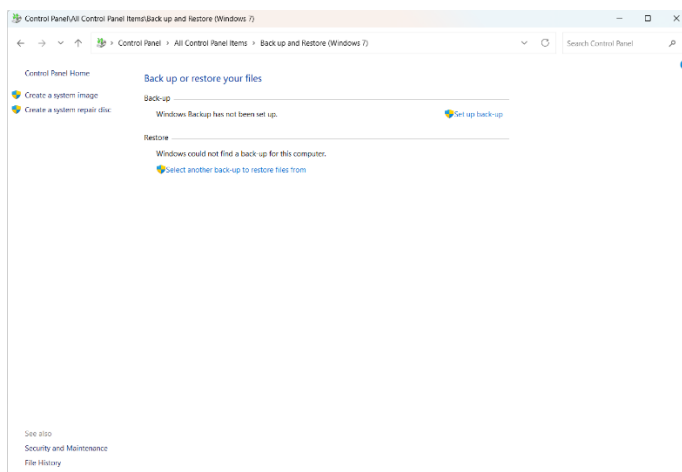

However, the old reliable 'Backing-up and Restore' is alive and well. See Related Support on the Accounts > Windows Backup

This provides help from Microsoft.

Easiest way to 'Back up and Restore' (Windows 7 believe it or not is still with us for this). To access, click in the Search box / Cortana, type Control Panel and be taken to the Control Panel in the old-fashioned manner. Then, click the link for Back up and Restore (Windows 7):

That takes you to Setting up of a back-up.

Note the 'Create a system image' on the left with 'Create a system repair disc'.

Not many users do this ... but we all should for emergencies.

Proceed to use the wizard, using an external hard disk drive if available.
